

MEASURING OF OPERATIONAL USABILITY WITHIN THE GRIPEN E DEVELOPMENT

Jonas Jeppsson
Operations Analyst

SCOPE

- Background
- Validation strategy
- Operational usability
- Test stations
- Measurement

WHAT WE DO

- Responsible for validating the operational usability
- Continuously validating Gripen E during the whole development process against stated scenarios
- Assessing the operational usability in full scale scenarios as manned simulations, desktop simulations and round table discussions
- Joint venture with the FMV and the SwAF

BACKGROUND

- Reduce cost/time and improve capability
- During early study phase for the Gripen E, some improvements were identified that could:
 - A) minimize retakes in design
 - B) deliver the desired operational capability to the SwAF
- Early validation against relevant scenarios was one key factor

WHERE ARE WE NOW?

- Rollout of first test aircraft
- Concept/design development and validation ongoing
- IOC 2019 and FOC 2023

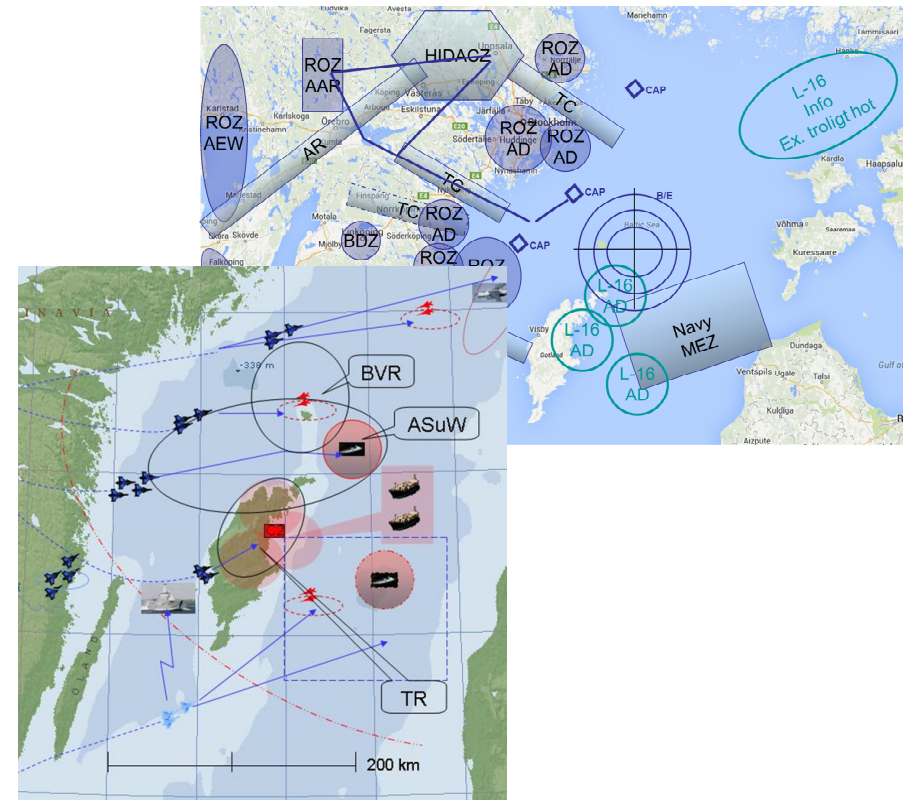

VALIDATION STRATEGY

SCENARIOS AND CONOPS STATES THE USER NEEDS

- The scenario defines the challenge – and what to be achieved
- The Concept of Operations (CONOPS) defines the technical and tactical solution of the scenario
- They can be used as a "map" and reference to:
 - Requirements specification when designing
 - Validation

PRODUCING A TEST PLAN

- Scenarios and CONOPS are broken down into specific mission situations, needs are identified
- Capability needs are broken down into technical needs
 - Critical Operational Issue (COI):
 - *"Perform air-to-air engagement against a cruise missile"*
 - Measurement Of Effectiveness (MOE):
 - *"The target acquisition system can produce target data for air-to-air missiles against cruise missiles"*
 - Measurement Of Performance (MOP):
 - *"The pilot subjective rating of target acquisition exceeds TLR 4"*
- Will lead up to test plans

VALIDATION THROUGH THE WHOLE PROCESS

Multi-platform

Aircraft

Sub-system

| General | Feedback of design | | | Requirements closure |
|---|------------------------|--|--|---|
| with the end-user or its represent using the system | Phase 1 Requirements | Phase 2 Concept | Phase 3 Draft version | Phase 4 Delivery version |
| | | Idea of technical solution | | |
| | Environment | Environment | Environment | Environment |
| Validation Level 2 | Round table discussion | Simulation / Round table discussion | Simulation with CONOPS in a scenario / T:edition in aircraft | Aircraft/ Mission support system/ ILS / Simulator etc |
| Validation Level 3 | Round table discussion | Simulation with a full CONOPS scenario | Simulation with CONOPS in a scenario / T:edition in aircraft | Aircraft/ Simulator |
| Validation Level 4 functional chain | Round table discussion | Simulation with type situations from CONOPS (e.g. from CAP to a METEOR-engagement single target) | Simulation with type situations from CONOPS (e.g. from CAP to a METEOR-engagement single target) | Aircraft/ Simulator |

Design phase

OPERATIONAL USABILITY

OPERATIONAL USABILITY

- There are technical prerequisites to manage the scenario
- The functional chains to manage the scenario are intact
 - E.g., Kill-chain / Live-chain

KILL-CHAIN

- Mission management
- Target search
- Target detection and location
- Target identification/classification
- Weapons employment
- Assessment

LIVE-CHAIN

- Mission management
- Detect threat
- Avoid detection
- Avoid tracking
- Avoid being shot at
- Avoid missile lock
- Avoid hit
- Durability

TEST STATIONS

ROUND TABLE DISCUSSIONS

- In all phases and levels
- To validate:
 - These are the needs (operators)
 - These are the requirements (customer and program management)
 - This is the concept, design, challenge, solution (engineers)

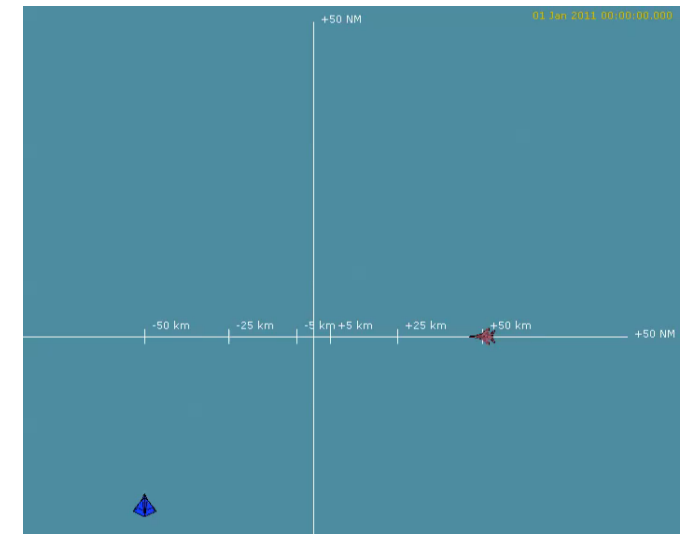

| General | Feedback of design | | | Requirements closure |
|---|---------------------------|---|---|--|
| | Phase 1 Requirements | Phase 2 Concept Mission | Phase 3 Draft version | Phase 4 Delivery version |
| with the end-user or its representing the system | Environment | Environment | Environment | Environment |
| | Round table discussion | Simulation / Round table discussion | Simulation with CONOPS in a scenario / Tradition in aircraft | Aircraft/ Mission support system/ ILS / Simulator etc. |
| Validation Level 2 | | Simulation with a full CONOPS scenario | Simulation with CONOPS in a scenario / Tradition in aircraft | Aircraft/ Simulator |
| Validation Level 3 | | Simulation with typical situations from CONOPS (e.g. from CAP to a MILITARY engagement single target) | Simulation with typical situations from CONOPS (e.g. from CAP to a MILITARY engagement single target) | Aircraft/ Simulator |
| Validation Level 4 functional chain | | | | Aircraft/ Simulator |

UNMANNED SIMULATIONS (FLAMES)

- In all phases and levels
- Statistic objective simulations
- To validate:
 - Sensor/weapon performance
 - Aircraft performance
- Indication of performance with basic models

| General with the end-user or the represent using the system | Feedback of design | | | Requirements chain |
|---|---------------------------|---|--|---|
| | Phase 1 Requirements | Phase 2 Concept Study of several solutions | Phase 3 Draft version | Phase 4 Delivery version |
| | Requirement | Requirement | Requirement | Requirement |
| | | | | |
| Validation Level 2 | Round table discussion | Simulation / Round table discussion | Simulation with CONOPS in a scenario / Transition in aircraft | Aircraft/ Mission Integration system/ S.S. / Simulator etc. |
| Validation Level 3 | Round table discussion | Simulation with a full CONOPS | Simulation with CONOPS in a scenario / Transition in aircraft | Aircraft/ Simulator |
| Validation Level 4 functional chain | Round table discussion | Simulation with type situations from CONOPS (e.g. from CAF to a NET/ISR engagement single target) | Simulation with type situations from CONOPS (e.g. from CAF to a NET/ISR engagement single target) | Aircraft/ Simulator |

MANNED SIMULATIONS

- In all phases and levels
- Network simulation facility
 - 8 manned simulators
 - 2 GCI stations
- To validate:
 - Pilot in the loop

| General with the end-user or its representing the system | Feedback of design | | | Requirements closure |
|--|---------------------------|--|---|---|
| | Phase 1 Requirements | Phase 2 Concept Study of technical solution | Phase 3 Draft version of technical solution | Phase 4 Delivery version |
| | Environment | Environment | Environment | Environment |
| Validation Level 2 | Round table discussion | Simulation of Round table discussion | Simulation with CONCEPT in a scenario / T addition in aircraft | Aircraft Mission support system / A3 / Simulation etc |
| Validation Level 3 | Round table discussion | Simulation with a full concept scenario | Simulation with CONCEPT in a scenario / T addition in aircraft | Aircraft Simulator |
| Validation Level 4 functional chain | Round table discussion | Simulation with type situations from CONCEPT (e.g. from CAP to a METEOR engagement single target | Simulation with type situations from CONCEPT (e.g. from CAP to a METEOR engagement single target | Aircraft Simulator |

AIRCRAFT

- In phase 3 and 4, all levels
- To validate:
 - Full functional chains (e.g., QRA with turn around)
- Feed-back on models during early simulations

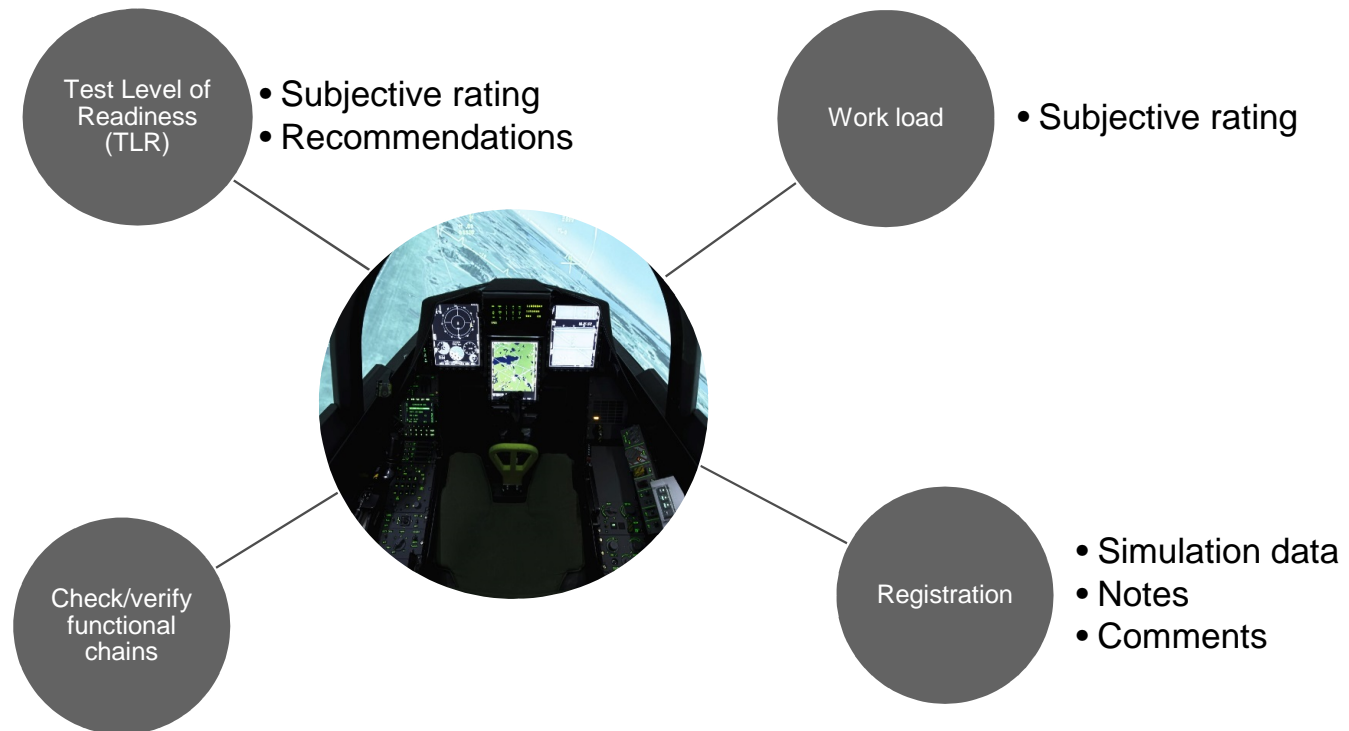

| General | Feedback of design | | | Requirements checks |
|---|---------------------------|--|---|---|
| | Phase 1 Requirements | Phase 2 Concept Requirements | Phase 3 Draft version Requirements | Phase 4 Delivery Requirements |
| with the end-user or its representing the system | | | | |
| Environment | Environment | Environment | Environment | Environment |
| Validation Level 2 | Round table discussion | Simulation / Round table discussion | Simulation with CONOPS in a scenario / Tradition in aircraft | Aircraft/ Mission support system/ AC / Simulator etc. |
| Validation Level 3 | Round table discussion | Simulation with a full CONOPS | Simulation with CONOPS in a scenario / Tradition in aircraft | Aircraft/ Simulator |
| Validation Level 4 Functional chain | Round table discussion | Simulation with type situations from CONOPS (e.g. from CAP to a METEOR) engagement single target | Simulation with type situations from CONOPS (e.g. from CAP to a METEOR) engagement single target | Aircraft/ Simulator |

MEASURING OF OPERATIONAL USABILITY

METHODOLOGY

LESSONS LEARNED

- The subjective judgement does not always reflect the tactical result
- Limited number of resources
- It is complex to define and agree on definitions like "operational usability" – what to measure?
- Simulations can be used as input for e.g., calculating operational profiles
- A mutual learning effect
- Has resulted in important findings!

THANK YOU!
